10 Stability and reactivity

10.1 Reactivity: Strong oxidizer**10.2 Chemical stability:** Stable under recommended storage conditions**10.3 Possibility hazardous reactions:**

Use of persulfates in chemical reactions requires appropriate precautions and design considerations for pressure and thermal relief.

Decomposing persulfates will evolve large volumes of gas and/or vapor, can accelerate exponentially with heat generation, and create significant and hazardous pressures if contained and not properly controlled or mitigated.

Use with alcohols in the presence of water has been demonstrated to generate conditions that require rigorous adherence to process safety methods and standards to prevent escalation to an uncontrolled reaction.

10.4 Conditions to avoid: Heat (decomposes at extreme heat); Moisture**10.5 Incompatible materials:** Bases, halides, oxidizing agents, strong reducing agents, combustible materials, and acids.**10.6 Hazardous decomposition products:** Oxygen which supports combustion; Sulfur oxides
